

ARTIFICIAL INTELLIGENCE IN THE INSURANCE SECTOR

Interactive discussion with Anand Rao

- Have any principles been developed in the industry or otherwise to try and better monitor and regulate AI?

- What are the critical issues and points in which regulators must consider when trying to decide whether regulation is necessary?

- What types of technical expertise should regulators considering having on board when trying to better understand how they might understand AI issues in the insurance sector?

-
- If insurance regulators are considering AI regulation, who should they be trying to understand in the value chain of insurance production?

-
- Is there a realistic possibility of a certain AI model being widely applied, and systemic risk becoming a concern in the insurance or other financial sectors?

THANK YOU
